SPORTS FACILITY MANAGEMENT

FINAL PROJECT

PLANNING A MUNICIPAL MULTI-SPORT FACILITY

OBJECTIVES:

The sports complex will offer more than a centre equipped with a wide range of sporting facilities: it will give customers a place to meet, share experiences and enjoy community life.
The social and community dimension of the relationships and bonds formed through sporting activity will be a distinctive feature and a common thread throughout the sports complex.
Organise and promote a broad and varied programme of activities and events, opening the complex's resources to all ages and interests while encouraging an atmosphere of warm companionship and friendship.

The sports complex will be a cultural reference point. Among its many activities and programmes, an annual dance and performing arts festival will be planned with various collaborators of the complex.
Social and cultural activities, including sightseeing tours, will also be organised for people accompanying athletes who travel to compete in other cities. This will encourage families to enjoy becoming involved in competition programmes.

Activities for older customers: specific sports programmes for older people, with dedicated activities and instructors.
The sports complex will also support families who find it difficult to coordinate their work schedules, especially during school holidays), covering all leisure options and different interests, coordinating adults' activities with children's activities throughout the year.

Open spaces and recreation: outdoor areas designed for members' entertainment and leisure.

Educational guidance and pedagogical coaching.
Lecture series and workshops on innovation: Visual Thinking, Service Design, etc.

Exclusive offers and special discounts on professional services and products from sponsoring and partner companies.

PROJECT AND MANAGEMENT:

Carry out the most complete feasibility study possible, taking into account all the expenses and income we will have:

- Construction costs.
- Equipment costs.
- Capital to be financed.
- Leasing or renting.
- Complete equipment for each room, changing area, reception and treatment area.
- Depreciation of all equipment.
- Income (it is important to understand the financial value of our proposal and the different rates we will offer).
- Profit and loss statement.

A preliminary marketing study will examine the sports market around the complex to understand future customers: their interests, financial circumstances, families with or without children, ages, physical condition, diet, schedules and time devoted to sport, among other factors.

Fees will be in a mid-range price bracket, with options from basic membership to packages offering different levels of access to the facilities and services.

Monthly Expenses of a Sports Complex

The recurring monthly expenses for this type of sports complex are:

- Energy supplies
- Insurance
- Maintenance
- Cleaning
- Staff
- Unexpected expenses
- Office supplies
- Communication costs
- Marketing
- Advertising
- SGAE
- This feasibility study will allow us to estimate the expenses in each category accurately and make adjustments to equipment or rental costs.

The complex comprises the following sports facilities:

- **MULTI-SPORT CENTRE**
  Access control
  Classroom/meeting room
  Indoor swimming pool
  Multi-purpose pool with 8 lanes (25×17)
  Teaching pool (17×7.30)
  Spa/sauna and massage and rehabilitation area.
  Multi-sport courts (46 x 46 with stands)
  3 multi-purpose rooms (15 x 15)
  Gym
  Cardiovascular and strength training
  Fitness room
  Climbing wall
- **FOOTBALL STADIUM**
  Football pitch
- Training pitch
- **ATHLETICS STADIUM**
  400 m athletics track
  RACKET SPORTS CENTRE
  Tennis:
  2 indoor clay courts
  4 outdoor porous-surface courts
  Padel:
  4 indoor glass-walled courts

- **MULTI-SPORT COURTS**
  Basketball
  Futsal and handball
- **OPEN SPACES AND CIRCULATION**
  Green areas
  Running circuit
  Cycling circuit
- **PARKING**
  308 cars + 14 motorcycles

Sports activities outside the facilities:

- Mountain biking (members will be able to organise mountain bike activities in the surrounding area).

- Hiking routes offered at different times of year and for different levels and ages, visiting characteristic places and areas of outstanding nature in the region and nearby. Routes will vary in difficulty but suit the great majority of members, with both sporting and educational aims for younger participants (instructors with knowledge of nature).

Physiotherapy and Sports Medicine:

These services will be coordinated with the sports area, providing integrated and personalised support: RECREATIONAL LEVEL. Preventive, for healthy people who want to start activities to improve or maintain their health and prevent illness. THERAPEUTIC LEVEL. Curative, for conditions and injuries requiring assessment and sports physiotherapy treatment; an approach to rehabilitation. COMPETITIVE LEVEL. Sporting, focused on improving physical performance while reducing the risk of injury.

SUSTAINABILITY AND ENERGY SAVINGS

A commitment to prioritise internal measures that save resources and energy (energy efficiency).

- This is and will remain a principle in the facility design phase, because we consider it our responsibility to recognise the importance of sustainability for everyone. There are two reasons: savings on maintenance costs and the environmental commitment involved in being sustainable.

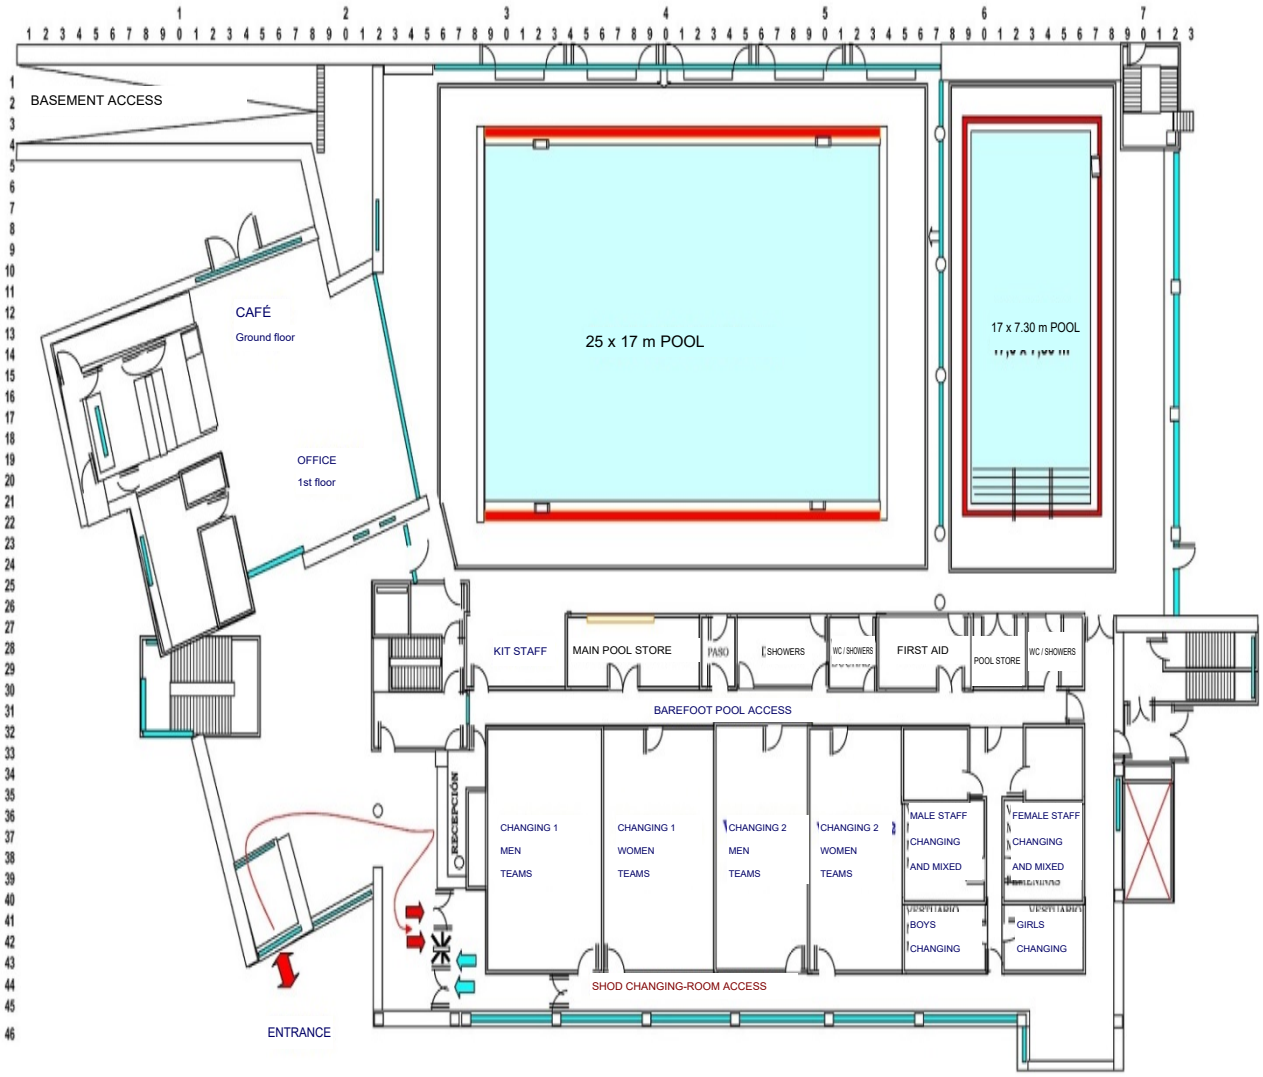

- This goes beyond a design and operating choice: it is a necessity. We will seek more logical ways of doing things, both in the project phase and during operation.

- Economisers, efficient lighting, heat recovery boilers, water-saving technologies, cogeneration and micro-cogeneration, solar energy, photovoltaic solar energy, biomass boilers and geothermal energy: all possibilities and options will be studied and assessed to achieve the stated objective.

Entrance and circulation area.

The café will have two entrances, for customers and external visitors.

All changing rooms connect to the different areas, except for the football pitch area, which has its own changing rooms.

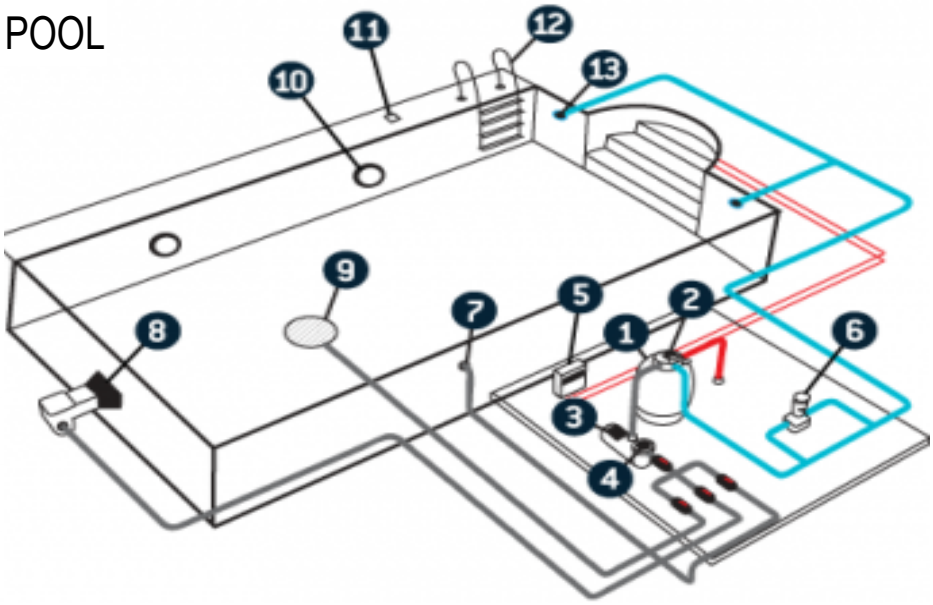

The swimming pool area will comply with the regulations in force.

Before opening the pool each day, the filtration system and pool basin must be cleaned, and the water temperature, air temperature and humidity checked.

THE SWIMMING POOL

1 Filter
2 Multiport valve
3 Pump
4 Hair trap
5 Electrical box
6 Chlorinator
7 Suction inlet
8 Skimmer
9 Bottom drain
10 Light
11 Deck box
12 Ladder
13 Return inlet

Daily checks:

Water hardness	PH	Alkalinity	Filters	Flocculation/coagulation	Chlorine
150-250 ml/l calcium carbonate	7 - 8,2	80 to 125 ppm(mg/l)	Vf> 5mh diatomaceous Vf 2mh cartridges Vf 20 mh sand	Aluminium sulphate: 5-20m/l Polyhydroxychloride:05-2m/l	0,6 ppm(mg/l)

Water temperature	Air temperature	Air humidity
Between 24-28 ºC	Between 26-28 ºC	60-64% RH

Note: The air temperature will be 1-2 ºC higher than the pool water temperature.

Gym area:

- Cardiovascular and strength training.
- Access to fitness rooms.

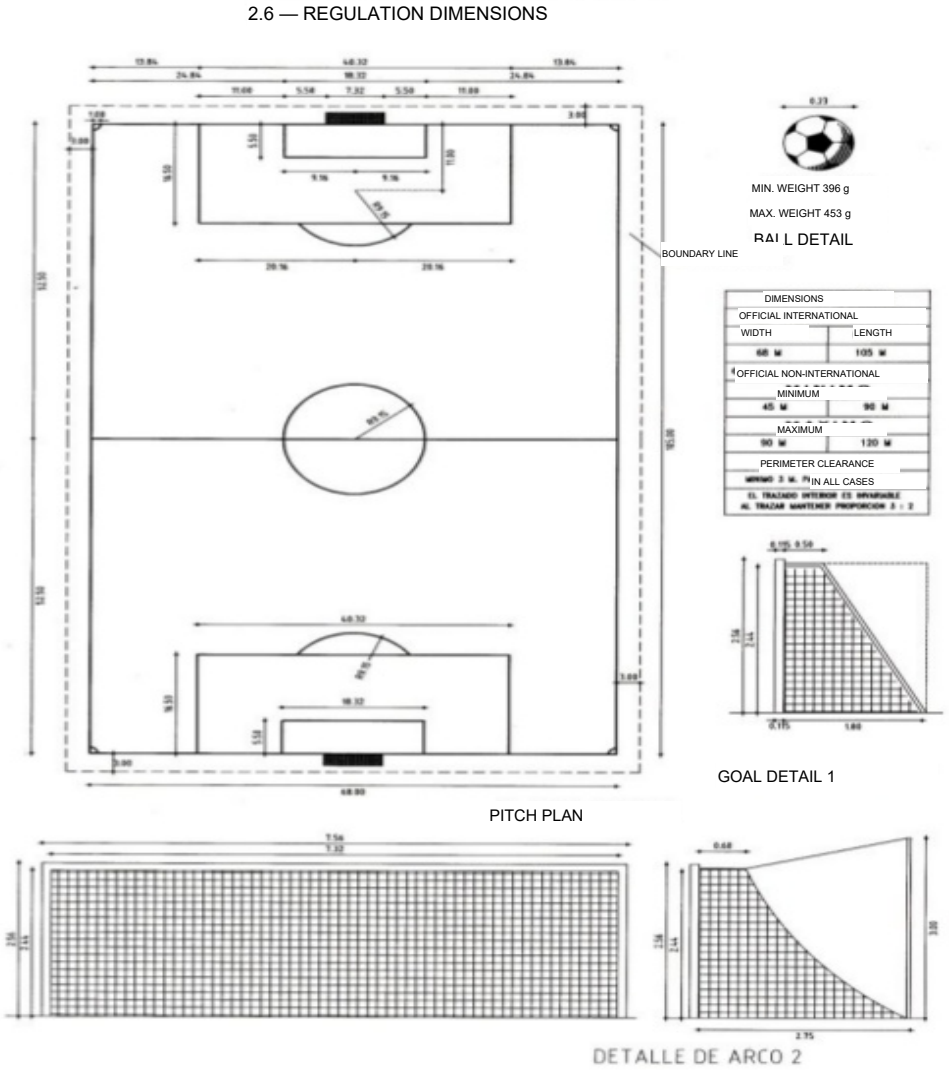

The gym can comfortably accommodate 50 people exercising at the same time (estimated duration: one hour).

The fitness rooms can comfortably accommodate 10 people.

All rooms have climate control, 2 strength training instructors and a personal trainer.

Football pitch area.

The football pitch area has its own changing rooms: two, one for each team, accommodating up to 15 people each.

It also includes stands for around 100 people (not shown in the plan).

Spa and rehabilitation area

The spa and rehabilitation area will have a dedicated space for customers' wellbeing, with a massage therapist and a physiotherapist.

Access will be independent of the other areas.

Plan of the spa, massage and rehabilitation area.

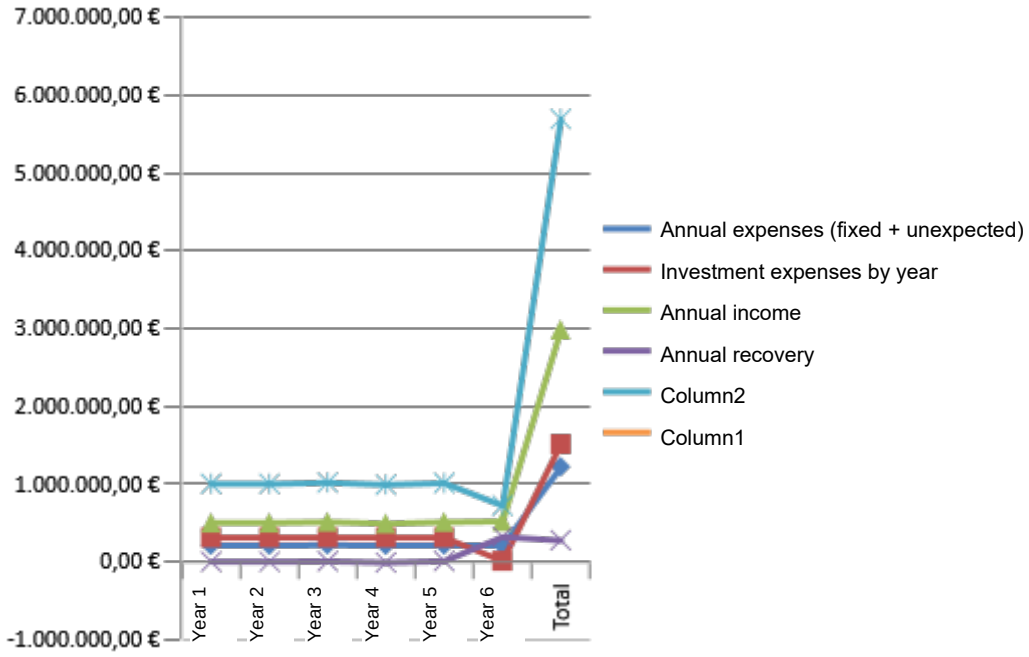

As it is independent of the sports complex, this area will carry an additional fee for each customer, or a single-session payment for external visitors.

It will have its own changing rooms and comfortably accommodate 15 people.

Overall budget and projections.

The project will last approximately 6 months, with estimated expenditure of 1.5000,00 euros.

Project sustainability and investment recovery are estimated over a period of 5 years, taking into account the investment made and the facility's monthly expenses.

Note: The figures provided are not actual figures; they simulate a possible project. This simulation aims to demonstrate understanding of different ways of explaining management.

CONCLUSION

This project is presented as highly profitable, with investment recovery over 5 years. It takes into account the community's economic and sociological circumstances, sporting needs and rights (according to Article 4 of the Constitution).

We will work with different sponsors and/or partners to organise events for both charitable purposes and income generation.

Inclusion is very important to this project, promoting gender equality and including people with disabilities and people experiencing social exclusion.
